

PERFORMANCES

THERMAL INSULATION AND SECURITY

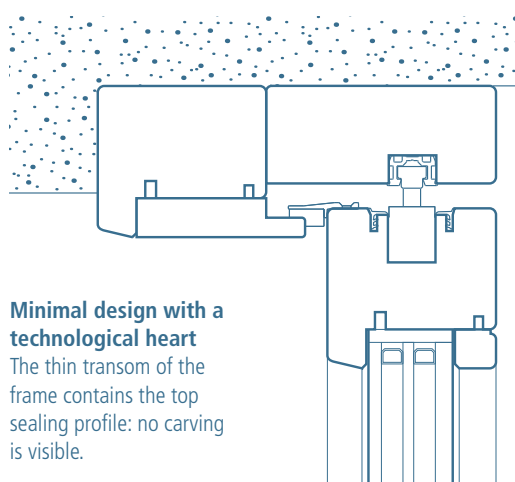

A high performance project without limits

A 25 mm maximum thickness threshold at the same level of the floor. The Climatcheck threshold offers a minimum visual impact and guarantees incredible thermal performances, thanks to the innovative fiberglass reinforced material. Imago is a barrier against air, water and wind thanks to the accessories range which have been tested in every condition.

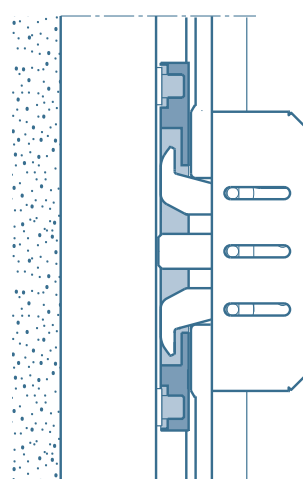

The central point Uni-V

guarantees the declared performances even with the natural deformation of wood. It avoids every contact between the sash and the frame. The opening movement becomes fluid and silent.

Minimal design with a technological heart

The thin transom of the frame contains the top sealing profile: no carving is visible.

The maximum security lock Poseidon

With two opposite facing hooks and a central bolt offers anti-burglar security levels never known before.
