

The innovative Lift&Slide Imago allows to have wide and luminous glasses, with the quality of the performances by AGB. Imago breaks the laws of design: jambs and transoms blend with the walls; the sections of the sliding sash have been reduced; the new embedded top guide disappears.

Both design and excellent results too, offered by the new Lift&Slide. In fact, Imago uses the Climatech threshold and the central point Uni-V. Thanks to the dedicated accessories range, it offers high performances, keeping a minimal design.

PERFORMANCES

THERMAL INSULATION AND SECURITY

CE MARK

Cascading contract cover enabling conformity with CE mark for external door/window (EN 14351-1:2010 European standard). For further information, contact the AGB Technician.

WATER TIGHTNESS

Up to 9A

AIR PERMEABILITY

Up to 4

WIND LOAD

Up to B3

IMPACT RESISTANCE

Up to 1

HEAT TRANSMITTANCE

Up to 0,69

VERTICAL APPLICATION FIELD

800÷3000 on sliding sash

HORIZONTAL APPLICATION FIELD

650÷3000 on sliding sash

KNOW-HOW AGB

Long and well-detailed researches developed new components to improve the Lift&Slide performances and in the meantime allowed AGB to know perfectly each secret of this sliding system. This knowledge is passed down to the producer, increasing the standard of the Lift&Slide.

AGB CASCADING

As planned by the CE mark about the Lift&Slide, AGB offers a Cascading contract on the Lift&Slide range in order to give to the window producer the ITT tests results, achieved by the samples tested into the AGBLab.

Starting from this requirement, AGB applies itself to give all the information and documentation to allow the joiner to produce a Lift&Slide which could be in compliance with the tested one, acquiring the test results with full rights.
